LINK. Simply Design.

Most of our work spaces have an open design. The fewer walls there are, the more structuring elements we need. This is made possible by LINK, the storage programme from PIURE designed for use anywhere. Even in these digital times, we still need storage space. Including the option of locking things up tight. LINK is so aesthetically appealing that one almost forgets how useful it is.

This modular system allows for two to five file heights for all kinds of combinations, and excels with its fine design and elegant reserve. Drawers, flaps, doors and open compartments are available as front variations.

The various element heights make LINK a shelving and cupboard system which adapts uniquely to suit the desired application area. Each shelf element has room for eight files. So you can fit 40 files behind the tallest door combination. Two front variants are available, handleless or with handle. The handle variant can also be chosen lockable for all fronts.

For beautiful storage of your technical devices, we offer an equipment element measuring 60 cm in depth and 75 cm or 112.5 cm in height. The element comes with a perforated back wall for adequate equipment ventilation. Further elements with heights of 75 cm and 112.5 cm are also available with a depth of 60 cm so that the element doesn't have to stand on its own. These elements can also be fitted with perforated back walls.

29 luxurious colours, any lacquer you desire and eight veneers are available for you to create your colour scheme. You can choose any colour as a matt lacquer or, for heavier duty, textured-finish lacquer.

1

Roll container with three drawers.

2

Roll container with two drawers and pen organiser in the top drawer.

3

Gliding legs, H 2.5 cm, make furniture easy to move.

4

Plinth, H 7 cm. A leg version made elegant by the recessed plate.

5

The castors offer flexibility for elements with a depth of 40 and 60 cm.

A multitude of mature equipment features round off the range.

1

The insulated back wall can be chosen for the freestanding variation.

2

The freestanding variation can either come with a back wall which echoes the appearance of the front or be equipped with an insulated back wall.

3

Black handle with a striking structure. A lock for the handle is optional and can also be retrofitted.

4

Completely unobtrusive: Flaps with filigree control wire and recessed fittings.

5

Inserts for hanging files are easily positioned in the drawers or can be placed behind doors for pulling out.

6

The clothing rail is possible with a shelf.

MESH

In an ideal office environment, the basic principle of „continuous flow“ is applied: The flow of information, the stream of thoughts just like the burst of productivity. Colleagues are connected without any barriers. They can easily exchange views or communicate spontaneously. This kind of human interaction is important for the well-being of employees – and therefore for the efficiency.

MESH – which has been created exclusively for the system furnishings manufacturer Piure – is a line by Werner Aisslinger which directly addresses the concept of space in modern built environments. The transparency is possible by a filigree metal frame, available in a chrome version or coloured. With colour tinted glass, MESH gives every room – whether a modern office or a home – a luxurious touch. The perforated plate metal is reminiscent of op-art: delivering an almost kinetic effect made of floating circles. Closed surfaces accentuate decorative elements.

In the object segment which incorporates the workplace, whole office layouts can be created with this simple modular system: with pieces in the welcome area for organization and storage, for meeting space and for sitting or standing. MESH is in this respect so transparent that the social and creative streams find space.

Created using discreet aluminium frames, the design eschews confinement and embrace transparency. Units can be created to include for example tinted glass, perforated plate or completely closed side surfaces.

Transparency with tinted shimmer is ensured by a glass version in different colours like green, blue, grey and brown. You define the material for the sides, the back panel as well as the cover panel: either closed, with perforated plate or with glass. The grade of transparency of MESH is set by you.

The elements with perforated plate appear soft and transparent. The choice of colour is probably not easy: all PIURE matt-lacquers are available. For high demands in the office area, we offer textured-finish lacquer for shelves, profiles and boxes in all PIURE colours. The profiles are additionally available in a chrome version.

A conversation with designer Werner Aisslinger about the basic idea of MESH and the possibilities behind.

What is the idea behind MESH?

Aisslinger: In the past, static arrangements have been playing an important role in the office area. This has changed nowadays – one is not hiding anymore behind big, heavy walls. The working world started moving. The atmosphere is more casual, more transparent. MESH offers the vanishing of surfaces by translucent and transparent materials. I like mentioning the term of an „osmotic office“ – being open and allowing letting light in.

A powerful red, a clear yellow, an inspiring blue ... Why are these strong colours being used?

Aisslinger: These colours strengthen the idea which stands behind the program. In the process of development, we have been thinking of modern and dynamic companies, wanting to refresh their office environment. The bright colours indicate that the way of thinking and the way of how things are done, is different in comparison to what is common in the office-world. MESH makes a statement, it presents a counterpoint. However, this does not mean that more subtle colours cannot be used for more classical room situations. MESH is able to be individualised and opens up a huge range of different customizing possibilities. Depending on the requirements or corporate concept of every project, matching colours can be realised as well.

So the materials are the most interesting feature of MESH?

Aisslinger: Materials shape a piece of furniture and give the furniture its character. Moreover, the customizability for the single working areas present a further important aspect during the development of modular furniture for the office-world. MESH plays with possibilities: A complete scenery can be created or single modules are positioned like in a collage. Having a look at the private life, different styles are used nowadays. Many things coexist, home decoration is individual and a mix of different styles. This casual individuality is provided by MESH: The line offers planners and interior designers the choice to select from a wide range of different modules – simple shelves can be created but also reception desks or combinations of several working tables – connected by sideboards offering lot of stowage space.

What was the biggest challenge during the process of development?

Aisslinger: The biggest challenge was to realize a completely new and complex line within one year and make it ready for series production at the same time. And what is essential for these systems – to create a modular principle which consists of a few components only – has to be aesthetical as well. It should be calm and straight – especially in the office area it is important that the furniture has a long-living design. To develop everything in short time was a big task. However, with Piure I had the ideal partner. Together we achieved our goal quickly and super innovative at the same time – by a constructive and communicative interplay.

Table worktops can be connected directly and easily to MESH. On one or both sides and in different heights. The table worktops are reinforced and feature a cable outlet which can be adapted colour wise. Even as a single standing desk MESH is suitable.

2

1

Good for the back and for keeping meetings short – the high-level work modules from MESH. Narrow work surfaces for offices, kitchens, hallways, etc.

2

The profiles are additionally available in chrome. Open or with individually selected closed fronts such as flaps, drawers or doors. The result: shelves or a cabinet – or a very personal combination of the two.

3

The work surfaces can be easily fitted, onto one or both sides and at different heights. We have additionally reinforced the boards to make them extra stable. Individually placed, the desk makes a great statement. Openings for cables? These are included and colour-integrated.
